

Revalidation working groups

There are three working groups overseeing the development of the GOsC's revalidation scheme for osteopaths. These groups advise and report to the Council, which has overall responsibility for the scheme and makes the decisions about the development of the scheme.

Revalidation Standards and Assessment Working Group

This group reviews, develops and advises the Council on the standards osteopaths will have to meet and be assessed against for revalidation, the kinds of evidence they will need to provide and the guidance we will provide them with.

Revalidation Public and Patient Involvement Group

The role of this group is to advise the Council on the involvement of the public and patients in the development of the revalidation scheme, to help ensure that the scheme is appropriate, relevant and fit for purpose.

Research Working Group

This group advises the Council on the research needs of the revalidation work programme.
